

		Predict what would mean each possible outcome			
		Measured dependent variables (What are you measuring)	Outcome 1	Outcome 2	Outcome 3
Independent variables. (What are you changing between samples to see the effects of the change).	Treatment 1		<i>If...</i>	<i>If...</i>	<i>If...</i>
	Treatment 2		<i>And...</i>	<i>And...</i>	<i>And...</i>
	Treatment 3 (control)		<i>And...</i>	<i>And...</i>	<i>And...</i>
			<i>It would mean that...</i>	<i>It would mean that...</i>	<i>It would mean that...</i>
In this row, you will expose which are the possible conclusions you could extract from each possible outcome.
